

DELTA POWERBOATS

72

Delta Powerboats is an independent motor yacht builder established 2003 in Sweden. We integrate innovative design concepts with timeless craftsmanship to create unique yachts for unique people. Notable milestones from our past are the asymmetrical deck layouts in our sw-series and the groundbreaking carbon fiber designs in our carbon series.

Progressions that promote safety and comfort, improved fuel efficiency and reduced environmental impact. Now we advance our innovational approach further with the launch of the Delta 72, a striking statement in style, quality and efficiency. It's more than just a new yacht, it welcomes you to the future of motor yachting.

## DELTA POWERBOATS 72

Originally commissioned by a repeat customer, the mission for the new 72 was to create a modern motor yacht that could excel both as a long-distance voyager and as a sociable day boat with large parties on board. Constructed entirely in lightweight carbon fiber, the result is a master class in yacht design, rewriting the rules for fuel efficiency and what it means to navigate with style and confidence.

Developed in collaboration with Mannerfelt Design Studio, performance and efficiency are further ensured by the designers' extensive experience in speedboat design. The sleek lines and refined interior are not merely design features, they reflect our commitment to functionality, elegance and excellence, where every detail is carefully executed to elevate your experience on the water.

## LIVING LARGE

Designed for big days out guests enjoy an effortless al-fresco lifestyle with multiple exterior lounges and sunbeds. Sliding aft- and side doors blur the boundaries between the inner and outer decks and the expansive aft platform, with the optional Transformer hydraulic extension, provide a seamless link to the sea.

## FREEDOM OF CHOICE

The lightweight hull is precision moulded with vacuum-sealed layering, using only the most advanced carbon fiber composite components. Powered by either inboards or outboards, owners have the opportunity to choose propulsion between twin Volvo Penta D13-IPS inboards or quadruple Mercury V12 outboards.

Saloon and galley

## GO WITH THE FLOW

The saloon layout has been thoughtfully designed for both private cruising and entertaining. Generous lounge areas, a spacious galley, and a well-appointed helm station creates a seamless flow on the main deck. The expansive windows provide excellent visibility and a strong connection to the surrounding seascape.

Owners are offered to design the interior with a curated mix of contemporary materials and options. Wood types includes bleached oak or natural teak, lacquered in six layers to a sophisticated and durable silk finish.

## A NATURAL HABITAT

The handcrafted interior reflects the Swedish heritage of Delta Powerboats: clean lines with a focus on comfort, light, and functional living spaces highlighted by clever detailing, premium materials and perfect joinery. The arrangement below deck accomodates eight

guests across four cabins, all with its own ensuite, along with crew quarters for two crew members. The owner enjoys a full-beam master suite including a super king bed, lounge area, concealed TV and a work- and vanity combi desktop.
